

錢財不可露眼，
財不露白，才能保平安。

慎言慎行
守心守分

Reason for “Open”	Explanation
Access to external knowledge/expertise	No organization possesses all the expertise needed to innovate effectively. External partners can contribute ideas, technologies, & know-how.
Faster innovation	Leveraging external solutions reduces the time & costs for R&D.
Lower R&D costs and risks	Sharing development efforts with partners spreads costs & reduces uncertainty.
Access to emerging technologies	Startups, universities, & research institutes often pioneer new technologies before large firms.
Improve competitiveness	Firms can innovate more rapidly and stay ahead of competitors.
Create new business opportunities	External ideas may lead to new products, services, markets, or business models.
Commercialise unused knowledge	Internal inventions that are not strategically important can be licensed or spun off for value creation.
Extend the innovation ecosystem	Collaboration with customers, suppliers, startups, & universities strengthens innovation networks.
Meet changing customer needs	Customers can be directly involved in co-creation, helping organisations develop more relevant solutions.

‘Openness’ can be applied throughout the innovation cycle

Innovation Lifecycle Stage	What Can Be Opened?	Examples of External Contributions
1. Opportunity Sensing & Problem Identification	Identifying unmet needs, trends, challenges, market gaps	Customers identifying pain points, lead users suggesting future needs, citizen feedback, industry advisory boards
2. Ideation & Concept Generation	Generating new ideas and concepts	Crowdsourcing, idea competitions, hackathons, open innovation challenges, employee suggestion schemes
3. Research & Knowledge Creation	Creating scientific, technical or market knowledge	University partnerships, joint research centers, open science initiatives, industry consortia
4. Design & Development	Designing and building solutions	Co-development with suppliers, startup collaborations, open-source development communities, technology alliances
5. Prototyping, Testing & Validation	Evaluating functionality and market acceptance	Beta users, living labs, pilot customers, user communities, citizen science projects
6. Commercialization & Go-to-Market	Bringing innovations to market	Licensing partners, distributors, franchisees, venture partners, commercialization agents
7. Diffusion & Adoption	Promoting awareness and uptake	User communities, influencers, professional associations, ecosystem partners, ambassadors
8. Scaling & Ecosystem Expansion	Expanding reach and capability	Platform developers, strategic alliances, channel partners, developer ecosystems, complementary product providers
9. Improvement & Evolution	Ongoing enhancement after launch	Customer feedback, communities of practice, open-source contributors, supplier innovation programs
10. Value Extraction & Renewal	Capturing value from existing innovations and reusing knowledge	Patent licensing, patent pools, spin-offs, technology transfer, open-sourcing legacy technologies
